

DIGITAL ASSET MANUAL ENROLLMENT

The Digital Asset Manual Enrollment platform delivers a comprehensive solution for managing user access, onboarding, and governance within digital environments. Designed for organizations that prioritize security, compliance, and operational efficiency, this system simplifies how users and entities are enrolled, verified, and connected to digital assets all through a secure and framework.

Secure Web Onboarding

Ensure every user enters your digital ecosystem through a safe and structured process. With Account Centric Enrollment, each account is individually registered and verified to maintain full control over access permissions. For large scale deployments, the Bulk Account Import & Setup capability enables administrators to onboard multiple users simultaneously, reducing manual effort while maintaining strict security and accuracy.

Digital Asset Automated Enrollment

Transform the onboarding process with automation that saves time and minimizes human error. The Participation Engine ensures smooth onboarding by automatically managing reminders, creating a seamless experience for all users. Automated Account Onboarding configures user access based on predefined roles or policies, allowing faster integration with minimal supervision. Meanwhile, Account & Profiling continuously analyzes user behavior and attributes, helping irregularities and optimize account management strategies.

Entity & Access Governance

Maintain complete oversight of users, organizations, and digital resources. Through Organization Administration, administrators can define hierarchical structures, assign roles, and manage operational units within the system. User Access Control ensures that every individual or group has the right level of access to the right assets supporting accountability, security, and compliance across the entire digital ecosystem.

Where to Use?

Financial and Banking Sector

- Ensures safe and compliant onboarding processes for customers, employees, and business partners.
- The system regulates access to sensitive data, digital documents, and transaction platforms, maintaining full control and verification in line with industry standards.

Education and Research Institutions

- Manages accounts for students, faculty, researchers, and administrative staff within a unified digital ecosystem.
- Simplifies access to learning platforms, digital archives, and research databases while maintaining user accountability.

Corporate and Industrial Sectors

- Accelerates the onboarding of new employees, partners, and vendors through a standardized and secure enrollment process.
- Access governance features ensure that every user has the appropriate level of authorization based on their role and responsibility.
